BIKE TOOL

8-IN-1 MULTI TOOL

The Multi Tool has 8 essential tools to tighten and adjust the different bolts on your bike, which are located on the bike's handlebars, stem, seatpost, chain ring, brakes, derailleurs and various adjusters. You'll also find it pretty handy to use at home too!

TIGHTENING BOLTS

- 1) Select tool bit that matches the bolt, fold out the tool bit 180° to the tool body and insert into the bolt to ensure a secure fit.
- 2) Keep tool bit in bolt and fold back the tool body to 90°, then tighten bolt, turning clockwise. Do not over-tighten fragile bolts and take extra care with carbon bike parts.

For releasing a bolt, the above instructions should be followed, however the multi tool should be turned anti-clockwise.

The tool is engineered for torque of under 130lbf-in/150kgf-cm and as such this maximum torque should not be exceeded for safety reasons
